

My name is Flor A. Espinoza; I have a Ph.D. in Applied mathematics. I am a bilingual Spanish and English researcher with over five years of experience working in multidisciplinary teams performing data analysis, modeling, and interpretation. I can examine the characteristics of different data samples and make decisions to apply current known analytic tools or improve them for a more effective analysis. I count with extensive mathematics, statistics, and computer language skills. I can easily communicate with diverse audiences, take on new challenges, learn new concepts, and adjust to new environments. I have experience disseminating new research findings presenting work at various forums, and publishing results in well-recognized scientific journals. I am a highly motivated and actively involved team member during brainstorming meetings, asking questions, and contributing to problem-solving searches and discussions.

In September 2021, I founded Fiura Consulting, LLC, another American dream coming true. By founding Fiura, I became a first-time business owner, and I continue growing professionally, working as a research scientist. Fiura Consulting, LLC provides Research, Education, and Professional Services. Research services: data analysis, modeling, and interpretation, journal, and conference paper preparation. Educational services: math teaching advice, math teaching strategies, solutions search to improve education, and mentoring. Professional Services: research and motivational talks in English and Spanish.

I am looking forward to continuing growing as a person, professional, and expanding my Fiura Consulting company by opening a branch in Peru, my home country, and having a highly qualified and motivating team of researchers and educators.
